

Dear **Mr Sheopujan Das**,

Thank you for choosing Manipal Hospital Baner-pune for your diagnostic care.

Your laboratory test results are being shared following the completion of specialist review and clinical validation. Please find attached the reports that are currently authorised for release.

A brief status overview is provided below for quick reference.

Reports Summary

- Hepatitis C Virus Antibody (HCV)-ECLIA **Completed**

These reports have been reviewed and authorized, providing a comprehensive overview of your laboratory investigations.

Your health information is handled with strict confidentiality and clinical oversight at every stage.

Best regards,

Manipal Hospitals Laboratory Services

Name : MR SHEOPUJAN DAS
Registration No : MH018517344
Patient Episode : R16000030077
Referred By : REFERRAL DOCTOR MBP
Receiving Date : 09 Jun 2026 20:42

Age : 67 Yr(s) Sex :Male
Lab No : 2603101333-1
Collection Date : 09 Jun 2026 20:15
Reporting Date : 10 Jun 2026 11:31

MICROBIOLOGY

Hepatitis C virus Antibody(anti-HCV)(ECLIA)

Specimen-Serum

Test Value 0.05 S/COCOI

Cut-off Value 1 COI

Test Result Non-Reactive

Method: ECLIA (electro chemiluminescence immunoassay)

Technical Note:

Antibodies to Hepatitis C Virus appear after variable periods of time in different patients. Other tests like molecular assays can be used for confirmation of results. The detection of anti HCV antibodies indicates a present or past infection with HCV, but does not differentiate between acute, chronic or resolved infection. It is recognized within the scientific community that presently available methods for anti HCV detection are not sensitive enough to detect all potentially infectious units of blood or possible cases of HCV infection. The antibody concentration may be beneath the detection limit of this assay or the patient's antibodies do not react with the antigens used in this test. In addition, non-specific results cannot be ruled out with the Elecsys Anti HCV II assay.
